Jukebox: image request

A trial. I only need **images**. A developer builds the 3D model from them in a game engine, so the views must line up exactly. Please do not make a 3D file.

1. What it is

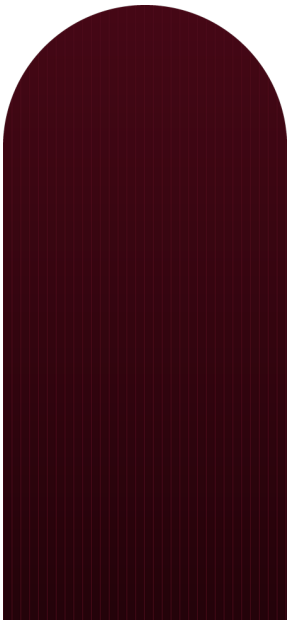

A 1950s-style rounded-top jukebox for a dark, moody early-1990s arcade. Chrome, curved glass, glowing neon tubes, warm wood-grain sides, a speaker grille at the bottom, and a selector plate with a small green display. It must look like a real, rendered, physical object. No flat clip-art, no word-art lettering.

Real size: **0.9 m wide, 1.95 m tall, 0.65 m deep.** Keep these proportions in every view (width : height = 0.46 : 1).

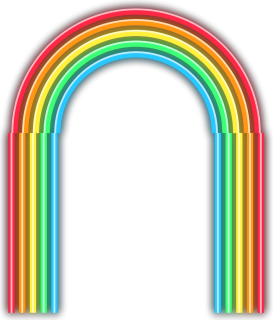

2. What exists now (for style)

Current front (keep this design language)

Current side profile

Current neon glow layer

Keep the same colour mood: deep red and magenta body, cyan and amber neon, gold-chrome trim. Improve realism: real chrome reflections, glass depth, wood grain, speaker cloth, worn metal.

3. Images to produce (10 images)

For views 1 to 4 (the build views): perfectly flat orthographic camera, no perspective, no tilt. Plain pure black background. Even soft light with no strong shadows and no floor. The object fills the frame with the same margin, and every view uses the **same scale** (same pixels per metre) so they match. Output 2048 px tall.

#	Image	Exact specification
1	FRONT, straight on	Camera level with the middle of the machine, looking dead straight at the front. Show the dome, selector plate with three round buttons (PREV, PLAY/STOP, NEXT), and the speaker grille. All neon switched on.
2	SIDE, straight on (left)	Exactly 90 degrees from the front. Shows the true curved profile from floor to the top of the dome. This shape is the most important.
3	BACK, straight on	Plain back panel, ventilation slots, a small power cable at the bottom.
4	TOP, straight down	Looking straight down from above: shows the width and depth of the curved top.
5	THREE-QUARTER, front left	Normal perspective, camera at eye height, 35 degrees to the left. Dark brick wall behind. Shows how it looks in the room.
6	THREE-QUARTER, front right	Same, from the right.
7	CLOSE-UP: dome and top	The curved glass, chrome arch and neon tubes.
8	CLOSE-UP: selector plate	The green display panel and the three round buttons, large and sharp, straight on. No readable text on the display.
9	CLOSE-UP: speaker grille and lower body	Speaker cloth, chrome strips, wood-grain sides, kick plate.
10	MATERIALS sheet	One image with six square swatches in a grid (seamless textures): chrome, red-magenta enamel, wood grain, speaker cloth, glass with a pink tint, brushed gold.

Colour rules for views 1 to 4: do NOT add glow haze, lens flare, or bloom beyond the object's edge. The edge of the object must stay crisp so the outline can be traced.

4. How I will judge the trial

Check	Pass if
Views line up	The side profile height and front height match, so I can build a shaped model.
Edges	Crisp outline on black for views 1 to 4.
Realism	Looks like a rendered object with real materials, not flat artwork.
Style	Matches the dark red and magenta mood of the current jukebox.

5. Prompt to paste into Copilot

```
Make a set of rendered images of a 1950s-style rounded-top jukebox for a dark, moody
early-1990s arcade. Real size 0.9 m wide, 1.95 m tall, 0.65 m deep. Chrome, curved glass dome,
glowing cyan and amber neon tubes, deep red and magenta enamel body, warm wood-grain sides,
speaker grille at the bottom, a selector plate with a small green display and three round
buttons labelled PREV, PLAY/STOP and NEXT. Use the attached pictures for the style. Produce the
10 images listed in the attached brief. Views 1 to 4 must be flat orthographic (no
perspective), on a pure black background, even soft light, same scale, 2048 px tall, crisp
edges and no glow haze. Make each image a separate file. Realistic rendering, no clip-art, no
word-art text.
```
