Fatty's Game Shack

Visual upgrade brief for a native Meta Quest VR arcade. Give this sheet to an AI coding or art assistant with the prompt on the last page. The app is built in Godot 4.4 for Quest 3. Code and art: github.com/thejoeyrob/ZC-Zombie-Smash, branch quest-build, folder quest/.

1. The look we want

A realistic early-1990s arcade at night. Dark, moody and warm, with real dark brick walls (the owner loves the brick), patterned carpet, neon in the ceiling, and glowing machines as the focal point of the room. It must feel like a real place, not a hotel lobby and not a bright showroom.

Always: rendered, painted, textured assets with real depth. Chrome, wood, glass and leather should look like those materials.
Never: plain box shapes, flat colour blocks, cheap word-art lettering, clip-art frames, or lower-quality crops of art that exists in a larger original.

2. Rules that must not be broken

Rule	Detail
Original art only	Use the full-size original of every picture. If only a small version exists, say so rather than stretching it.
Match the cabinet outline	Side art must follow the cabinet's own profile (quest/data/cab_profiles.json). Re-trace from the art's alpha if the art changes.
Headers	Marquee headers sit in front of the screen glass, never behind it, and use the ChatGPT art, not drawn text.
Brightness	Keep it dark and moody. Machine screens and neon are the brightest things in the room.
Quest performance	Target 72 fps. Textures up to 2048 px. Keep draw calls low. No real-time shadows on many lights.
Do not touch	The iPhone app (branch chatgpt-pro-build). Work only on quest-build.

3. Upgrade priorities, in order

#	Area	What to improve	Source art
1	Floor and carpet	One seamless early-90s patterned carpet across the whole room. No colour change under the pinball or vending machines.	art-source/chatgpt-round 2/textures
2	Jukebox	A chrome and neon rendered machine, fully textured, glowing selector plate, no box shapes.	assets/art/jukebox-*
3	Vending / snack machine	Glass front, lit product rows including POGZ, chrome trim.	assets/art/vending-*
4	Pinball	Rendered body, legs, playfield art, RESET button. Remove remaining block shapes.	assets/art/pinball-*
5	Lounge and bobble shelves	Real wood, leather seats, board games, bobble heads as rendered figures.	assets/art/bobble-*, boardgame.jpg
6	Ceiling	Neon diagonal ceiling and warm lamps. Dark between the lights.	tex-neon.jpg

#	Area	What to improve	Source art
7	Doors and car park	Branded door decals, fog, zombie silhouette outside, humorous EXIT sign.	scripts/door_scene.gd
8	Hands and arms	Controller hands in the style of Zero Caliber 2. The angle must be right and not creepy.	scripts/ (hands)

4. The eight machines

Machine	Character	Notes
Joey Rob	Hero	Would be the Zombie Smash machine. Owner has not decided yet on a ninth dedicated machine.
Jordan	Boss	
Debo	Boss	
Glowing Humanity	Boss	
Caffeinated Sloth	Boss	Different size from the mantis. Check proportions.
Dr Mantis	Boss	
Disco Man	Boss	
Fat Amy	Boss	

Each machine has a rendered side, a front bezel, a marquee header, and only FIRE and GRENADE buttons plus the joystick on the control surface. LOCK and MENU buttons sit on the front.

5. Known problems to fix

- The GRENADE sticker is clipped and reads as ORENADE.
- Side art for Jordan, Glowing Humanity, Debo, Sloth and Joey is a composite and should be replaced by full-size originals.
- Distant objects look grainy in the headset. Check texture filtering and anti-aliasing.
- Good art in art-source that is not yet used: bobble-head turnaround, arena paintings, lamp button set, opening story layers, purple stars texture.

6. How to deliver

Work in small batches of one area at a time. After each batch, state what changed, which files, and give screenshots. Do not change game rules or controls. Keep the existing file names so the build keeps working.

7. Prompt to paste

```
You are improving the visuals of a native Meta Quest VR arcade called Fatty's Game Shack,
made in Godot 4.4.1 with OpenXR. The repo is thejoeyrob/ZC-Zombie-Smash, branch quest-build,
folder quest/. Read the attached design brief first.

Goal: make the room look like a real, dark, moody early-1990s arcade with dark brick walls,
patterned carpet, neon ceiling and glowing machines as the focal point. Replace anything made
of plain box shapes with rendered, textured, shaped assets. Never use word-art lettering,
clip-art frames, or cropped lower-quality copies of art that exists in a larger original.

Start with item 1 of the priority table (floor and carpet). For each item: (1) list the
existing files and art you will use, (2) make the change with the smallest code edit, (3) keep
Quest performance at 72 fps, (4) give me before and after screenshots, (5) stop and wait for
my approval before the next item.

Do not touch the iPhone app or any branch except quest-build. Do not change gameplay or
controls.
```
