Fatty's Game Shack

Visual upgrade brief for a native Meta Quest VR arcade. Give this sheet to an AI coding or art assistant with the prompt on the last page. The app is built in Godot 4.4 for Quest 3. Code and art: github.com/thejoeyrob/ZC-Zombie-Smash, branch quest-build, folder quest/.

1. The look we want

A realistic early-1990s arcade at night. Dark, moody and warm, real dark brick walls, glowing machines as the focal point. Everything must look like a real object made of real materials: chrome, glass, wood, leather, rubber. **No plain box shapes, no flat colour blocks, no word-art lettering, no clip-art frames, and no lower-quality crops of art that exists in a larger original.**

2. Already done (leave alone)

Floor and carpet, brick walls, ceiling, the eight cabinet bodies and bezels, door and car park, point-to-choose controls. Do not redo these.

3. Rule set

Rule	Detail
Original art only	Use the full-size original. If only a small version exists, say so.
Brightness	Dark and moody. Screens and neon are the brightest things.
Quest performance	72 fps target. Textures up to 2048 px. Few draw calls, no many-light shadows.
Do not touch	iPhone app (branch chatgpt-pro-build). Work only on quest-build. Do not change gameplay or controls.

4. Part A: rebuilds (still made of box shapes)

Item	Problem now	Wanted	Files
Jukebox	Flat painted front with stacked slices for depth. Reads as a cut-out.	A real rounded 1940s-50s chrome and neon jukebox: curved glass dome, chrome trim, glowing selector plate, speaker grille, rendered materials. Keep three touch buttons PREV, PLAY/STOP, NEXT.	scripts/jukebox.gd, assets/art/jukebox-*
Vending / snack machine	Box with a flat front.	Glass front showing lit product rows including POGZ, chrome trim, coin slot, dispensing tray, subtle glow.	scripts/vending.gd
Pinball	Box body, thin legs.	Rendered cabinet with a slanted playfield glass, side art, chrome legs and lockdown bar, backbox with marquee, RESET button.	scripts/pinball.gd, pin_table.gd, assets/art/*pinball*
Lounge	Block furniture.	Leather seats, wooden board-game table, shelves of bobble heads as rendered figures.	scripts/arcade_room.gd, prize_wall.gd, assets/art/tex-leather.jpg, tex-wood.jpg

For each: ask for a rendered concept image from several angles first (front, side, three-quarter, top), then textures, then a shaped model. For Godot, an .obj or .glb with one texture set per object is ideal.

5. Part B: hands and arms

Problem: the hands and arms look creepy and wrong. They are angled about 90 degrees off and look unnatural. Files: scripts/vr_hand.gd, scripts/vr_arm.gd. Art: assets/art/hand-glove.jpg and hand-skin.jpg.

Wanted: the style of Zero Caliber 2: simple, believable gloved hands with a short sleeve, not bare skin, no long stretched forearms, no floating limbs.

Requirement	Detail
Orientation	The back of the hand faces up and away, fingers point forward along the controller, the thumb sits naturally. Fix the 90 degree error.
Look	Tactical glove with a rubber knuckle and a sleeve cuff. One consistent skin or glove material with proper shading.
Poses	Relaxed open, grip on the joystick, pointing finger for pressing buttons and pointing at the floor, fist.
Arm	Short forearm that follows the controller. No rubber-band stretching. Hidden above the elbow.
Deliver	A reference image sheet of the hand from five angles, then a rigged or posed model (.glb) for left and right.

6. How to deliver

One item at a time, in this order: hands and arms, jukebox, vending, pinball, lounge. Show images first and wait for approval before the next item.

7. Prompt to paste

```
I am making a native Meta Quest VR arcade called Fatty's Game Shack: a dark, moody, realistic early-1990s arcade with dark brick walls and glowing machines. Read the attached design brief. Floor, walls, ceiling and the main cabinets are finished, so ignore those.

Work on Part B first (hands and arms, Zero Caliber 2 style gloved hands), then Part A in order: jukebox, vending machine, pinball, lounge. For each item: (1) produce a rendered concept sheet from several angles, (2) describe the textures and materials, (3) tell me exactly what files to give the developer. Realistic rendered style only. No flat shapes, no word-art text, no clip-art frames. Stop after each item and wait for my approval.
```
